The result is the Adafruit bq25185 USB / DC / Solar Charger with 5V Boost Board! It uses the new bq25185 is a nifty charger chip with fairly high charge current, power path support, and the ability to ...

Here is an interesting circuit of 1.5 V To 5 V Voltage Boost Converter Circuit to generate stable and secure 5V DC from an ordinary 1.5V AA sized cell.

Power your portable and off-grid projects easily with the USB/DC/Solar LiPo Charger + 5 V Boost (Adafruit PID 6106). The board charges a single-cell LiPo ...

TI's BQ25798 is a I²C controlled, 1-4-cell, 5-A buck-boost solar battery charger with dual-input selector and MPPT. Find parameters, ordering and quality information

This board is meant to be everything you need to power your 5V electronics: simply connect a 500mAh or larger battery to the JST PH 2-pin port, then charge it ...

It has an exceptionally low quiescent draw - typically under .4mA. these features make LVBoost a great choice for powering projects from solar or other ...

It supports multiple power input sources, including USB, DC, and solar panels, making it ideal for portable and renewable energy projects. The board features a ...

This DC-DC boost module is very useful because it can take input voltage as low as 0.9V from small battery and boost it to a constant 5V. We can use it to operate Arduino, ESP8266, LED ...

A wide range of applications: This module can be applied to the ...
