Built on proven technology--with more than 20 million operating hours--our 6 MW onshore turbines deliver reliable, high power output for a wide range of ...

In September, the first blades for the 6.7MW offshore prototype with a length of 75.1 meters were produced. A prototype of the GW154/6.7MW will be installed in early 2018 and is ...

The N149/4.0-4.5 prototypes were installed in the summer of 2018, meaning the main warranted performance figures, such as the power curve and most ...

It incorporates a doubly-fed induction generator and a partial converter, combined with a compact drivetrain and a three-stage gearbox, resulting in a wind turbine designed to maximize performance ...

We are the first company in the industry to develop smart turbines that combine advanced control systems, data analysis, active performance control, and reliability prediction capabilities.

Featuring a medium-speed gearbox, permanent magnet synchronous generator and full-power converter, this turbine ensures efficient power generation, reliable ...

High Performance The single-turbine and site-level self-learning optimization algorithm, enables autonomous optimization of power generation performance

The V172-7.2 MW(TM) is designed for low to medium wind conditions and offers expanded site applicability through flexible ratings.

In the generator, Xinjiang Goldwind Science & Technology Co., Ltd. sets to synchronous permanent. The manufacturer has used one generator for the GW 154 / 6700. The maximum speed of the ...

The wind turbine records the largest single-unit capacity, the highest tower height, the longest blade, and the

6 7MW wind turbine generator

largest lifting capacity among the operating units in China's mountain wind power projects.
