If there is a GPS module or Bluetooth module that is directly powered by B+ B-, then the battery pack cannot be placed for a long time. If the average power consumption of the GPS module is calculated ...

Battery cabinet voltage shows 0V Seeing a 0V reading across your lithium battery terminals can be alarming--but it doesn't always mean your battery is permanently dead.

After about a minute I turned off and rechecked the terminal voltage and it's still at 0 across any of the wires. Not sure if the battery would need to be opened up and try to wake up each cell individually.

so in short, yes it is dead. next time start the car once every 2 weeks at least, and disconnect the ground from the battery if you are going to let it sit. ...

If your 12V 100Ah LiFePO4 shows 0V or won't charge, diagnose BMS trips, temp lockouts, and cable drops with quick tests that restore power safely and quickly.

Lithium-ion battery zero voltage can result from short circuits, faulty chargers, hibernation mode, or aging. Learn diagnosis, revival, and replacement steps.

Seeing 0V on your lithium battery? Learn the real causes--like BMS shutdown or cell failure--and how UpFix safely revives your battery with expert repair.

When I check the pack output voltage without the BMS it's around 21 V (very low, undercharged). When I check the BMS output it's around 17 V which becomes 0 V under load. I think ...

Your lithium battery shows zero voltage? Don't worry. This article will delve into the common causes of lithium battery zero voltage and provide some practical solutions to help you ...
