China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

The massive growth in wind and solar begs the question: why is China still building coal power plants and, by most analyses, way more than it actually needs? The answer is complicated.

China broke its own records for new wind and solar power installations again last year, official data showed on Tuesday, accelerating from ...

This review further proposes a strategic roadmap for sustainable development, emphasizing the integrated deployment of wind and solar as the dominant sources of power generation.

China is advancing a nearly 1.3 terawatt (TW) pipeline of utility-scale solar and wind capacity, leading the global effort in renewable energy buildout. This is in ...

China raced ahead building renewable energy last year, installing more wind and solar power than ever before and continuing to leave all other countries in the dust.

China's installations of wind and solar in May are enough to generate as much electricity as Poland, as the world's second-biggest economy ...

This study can contribute to a better understanding of suitable locations for solar and wind power plants and offer evidence-based, regionally-tailored, and dynamic recommendations, ...

(Yicai) Dec. 16 -- China will add more than 200 million kilowatts of new wind and photovoltaic power generation capacity next year as it accelerates the green ...

(Bloomberg) -- China's solar power generation overtook wind for the first time last year as a boom in cheap

China Wind and Solar Power Plant

panels continues to reshape the country's grid and climate trajectory. The nation ...
