-----

In a landmark development for China's energy landscape, 2025 marked the first time solar power generation eclipsed wind energy. This historic transition stems from the aggressive ...

Developed by researchers from Wuhan University of Technology, the new type of polymer solar cells successfully achieved 19.1% efficiency.

Solar panel installations in China rose slightly in September from a near three-year low, and output of solar cells also increased.

China's installations of wind and solar in May are enough to generate as much electricity as Poland, as the world's second-biggest economy ...

China's spectacular growth in renewable energy generation, 20 years in the making, dominates headlines. But the foundation of the energy ...

China was responsible for installing a massive 256 GW of that solar capacity. For context, it took until September last year to pass the 350 GW ...

China has more utility-scale solar than any other country. The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility ...

China is advancing a nearly 1.3 terawatt (TW) pipeline of utility-scale solar and wind capacity, leading the global effort in renewable energy buildout. This is in ...

China is building an enormous network of clean energy industries on the Tibetan Plateau, the world's highest. The intention is to harness the region's ...

(Yicai) Dec. 16 -- China will add more than 200 million kilowatts of new wind and photovoltaic power

# China s new solar energy on-site energy

generation capacity next year as it accelerates the green ...
