-----

Photovoltaic (PV) technologies dominate China's solar industry, with roughly 99% of China's solar power capacity. Chinese PV manufacturing accounts for the vast ...

China is leading this surge by a wide margin. In the first half of 2025, the country installed more than twice as much solar capacity as the rest of the ...

China's solar ambitions are emblematic of its broader race toward a green energy future, driven in part by Beijing's interest in becoming less reliant ...

China is building an enormous network of clean energy industries on the Tibetan Plateau, the world's highest. The intention is to harness the region's ...

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

As of 2024, China was responsible for 64 percent of the world's utility-scale solar and wind construction, with 339 gigawatt hours of renewable ...

Energy developer China Datang has started operations at the country's first demonstration base for integrated photovoltaic (PV) and concentrating solar power (CSP) ...

China has produced an excess of solar panels, causing overcapacity issues domestically and abroad. The US, the European Union, and China are facing challenges because of the glut of ...

China actually added record amounts of both wind and solar power capacity in 2025. And according to some calculations, it may even have reached peak CO2 emissions -- way ahead of its ...
