A basic generator always creates an AC current, but some generators take the AC current and converts it to DC, such as a car's alternator to charge your battery.

Solar cells, fuel cells, rectifiers, and batteries are some of the most common ways of generating and storing DC power. As the world moves towards ...

Station Services Switchgear in Power Plants Alternating Current (AC) Station Services Direct Current (DC) Station Services Station Services in Power Plants Direct current (DC) systems are used for control and monitoring purposes, but also for supplying power to DC drives and, as part of an emergency (UPS) system, via inverters to alternating-current drives. The required energy is stored in batteries, with conversion by means of rectifiers and inverters. In normal operations, the DC loads are fed via t... See more on electrical-engineering-portal
