InfoLink estimates that global module demand will come in at 470-529 GW this year, of which Europe contributes 82-93 GW, accounting for 18% of the market share, retaining the world's ...

In 2025, the EU solar market contracted for the first time in a decade. Last year, we warned policymakers with a yellow card that Europe's solar momentum would fade without decisive ...

Solar remained the EU's fastest growing power source in 2024, rising above coal for the first time. Wind power remained the EU's second largest power source, above gas and below ...

Find the most up-to-date statistics about the solar photovoltaic industry in Europe

Solar is set to become the largest green energy source globally, the question now for Europe is whether it can revamp its grid fast enough to prevent another dramatic blackout.

The European solar market slows to 65.5 GW of new installations in 2024, marking just a 4% growth compared to 2023. Explore the challenges and ...

The EU solar sector continues its upward trajectory, with mid-2025 figures confirming robust growth. SolarPower Europe's latest analysis highlights ...

Europe's electricity transition takes crucial strides forward as it took major steps forward. The EU's electricity generation in coal, gas and emissions. Fossil fuels dropped by a record 19% to their lowest ever level ...

The Europe solar PV market size crossed USD 63.1 billion in 2024 and is set to register at a CAGR of 7.1% from 2025 to 2034, due to the growing focus on green energy and net zero initiatives.

In the European Union, in 2023, about one-quarter of the EU electricity supply was met by imported fossil fuels, and without wind, solar PV and bioenergy, this share would have reached nearly 50%.
