Study reveals "solar trees" can match the power of a conventional solar farm while preserving up to 99% of forest cover.

Berkeley Lab collects, cleans, and publishes project-level data on distributed* solar and distributed solar+storage systems in the United States. The ...

It includes corresponding PV facility information, including panel type, site type, and initial year of operation.

The first thorough quantitative model to compare the installation of solar trees to conventional ground-mounted panels in coastal forest areas is presented in this study.

The U.S. Department of Agriculture (USDA) and U.S. Department of Energy (DOE) are working together to support farmers and rural communities ...

To accomplish this task, USFS and the U.S. Department of Energy's National Renewable Energy Laboratory (NREL) established a partnership to conduct an assessment of solar and wind ...

Using the clean energy from the sun, DCNR is deploying small scale solar arrays to take certain buildings and facilities off the grid, saving money and reducing DCNR's carbon footprint.

The Bureau of Land Management is announcing approval of the 600-megawatt Jove Solar Project, which could generate enough clean ...

This framework helps the Forest Service become more energy efficient, demonstrates effective sustainable management, and sets standards of energy practices for ...
