From the table below, you can be informed for the areas and the timetable of planned power interruptions, in order to schedule your work and to minimize your disturbance.

Find all the information you need in the event of an electrical fault or power cut and learn more about metering and other technical network issues.

Broad development of solar power in Greece started in the 2000s, with installations of photovoltaic systems skyrocketing from 2009 because of the appealing feed-in tariffs introduced and the corresponding regulations for domestic applications of rooftop solar PV. However, funding the FITs created an unacceptable deficit of more than EUR500 million in the Greek “Operator of Electricity Market” RES fund. To reduce that deficit...
