Call, click or chat with our in-house team for a fast quote or help designing a custom rack solution. From cage nuts, to data center design, we do it all at Rackmount Solutions.

Discover our rack cooling solutions, that will ensure the IT assets in your server racks only need to face the increased demand in data, not increased temperature.

From system builds, to fully functional, tested turnkey systems (using Celestica or third-party platforms), we can manage all stages of your project.

As rack densities surge and grid headroom tightens, liquid cooling is becoming the backbone of AI data centers. Here we unpack the strategic moves--Trane's ...

Analysis of these two containment options was performed by reconfiguring the test data centre for both hot and cold aisle containment and running two test simulations, one with a lower load of 5kW per ...

To address the challenges of high energy consumption and the significant risk of overheating associated with cooling systems in data centers, a rack-based cooling equipment was ...

The first embodiment of this work is an AC-to-DC sidecar power rack that disaggregates power components from the IT rack. This solution improves ...

These application-optimized servers are ideal for medium to very large AI training scenarios and contain dual AMD or Intel CPUs and eight high-performance NVIDIA GPUs. This purpose-built highest ...

Lastly, the tops of each bar in Figure 4 display the maximum facility water temperature that can be employed to cool the server rack. The first seven products shown have maximum facility water ...

High-Temperature Server Rack Turnkey Project

Our team was responsible for the design and implementation of both air and liquid cooling solutions to support the high-density server racks and test ...
