Abstract: Combined heat and power (CHP) generation plants are an assessed valuable solution to significantly reduce primary energy consumption and carbon dioxide emissions.

In the rapidly evolving healthcare landscape, artificial intelligence (AI) is revolutionizing hospital operations by enhancing operational efficiency and patient care. This study focuses on the ...

As Italy continues scaling up its energy storage infrastructure, the rise of large BESS projects marks a transformative phase in its energy transition. By 2050, ...

Browse our articles and resources about pv-and-energy-storage-roles-in-advancing-hospital-power-stability for European applications.

The aim of the work is the identification of potential interventions to improve energy performance in terms of efficiency and savings, in a sample structure considered representative of some healthcare ...

Discover how battery energy storage ensures uninterrupted power for hospitals, protecting critical loads and enhancing energy resilience with ...

Program for the energy and environmental renovation of the "A. Gemelli" University hospital in Rome, for the creation of a "Green Hospital" and the reduction of the carbon footprint of the structure.

From protecting Michelangelo's masterpieces to keeping espresso machines humming, advanced energy storage isn't just technical infrastructure--it's the silent partner in Rome's daily miracle.

The project sets a benchmark for energy efficiency in healthcare facilities, demonstrating how emissions can be reduced without compromising comfort ...

Battery energy storage systems (BESS) can match loads with generation and can provide flexibility to the

grid. This study is proposing the health sector as a new flexibility services provider for ...
