Battery banks are typically wired for either 12 volts, 24 volts or 48 volts depending on the size of the system. Here are example battery banks for both lead acid ...

A 12-volt battery, which includes six cells, reaches a full charge voltage of approximately 12.7 volts. Optimal voltage levels are essential for safe usage and charging.

Watt-Hour Capacity Voltage Series-Parallel Arrangements Top Off Each Battery Before Physical Assembly! Why 48V Is Better Battery Cable Sizing Cable Sizing Summary The voltage of you battery bank will be determined by your choice of inverter and charge controller. While large MPPT charge controllers can usually charge any voltage battery, most inverters are usable for only one particular voltage; either 12V, 24V or 48V. If you need an inverter of 2000W or larger we recommend you find an inverter built for 48V... See more on power.sil
