Solar photovoltaic (PV) array systems can suffer from reduced performance due to parasitic capacitances that create a closed-loop path, causing leakage current. This can lead to ...

This paper proposes an optimized predictive control strategy to mitigate the potential leakage current of grid-tied photovoltaic (PV) systems to ...

In this paper, a simplified model of leakage current in full-bridge topology is established, the causes of leakage current are analysed from the source of its generation, and three ways of leakage current ...

In three-phase transformerless inverters, for systemic reasons, the oscillations are of a much smaller amplitude and, as a result, they generate smaller leakage currents. The pass-through of AC voltage ...

One-diode PV cell circuit model, a portion of the photocurrent (I_{ph}) generated by incident light is lost as leakage through the shunt resistance, reducing the current available to the load.

In photovoltaic (PV) power generation systems, the parasitic capacitor is introduced between PV panels and the grounds, which inevitably leads to the leakage current. The leakage current causes ...

There are two distinct methods to eliminate the leakage current in the solar PV array system: (i) obstruct the leakage current, (ii) reduce the variation/constant common-mode voltage.

In photovoltaic power station, the solar cells in the module are exposed to positive or negative bias, which will lead to leakage current between the frame and

Current leakage is a fairly common systemic phenomenon in photovoltaic energy installations and it shows up even in new systems, although ...

Leakage current in solar AC power generation system

This paper proposes a transformer-less multi-level solar power generation system. This solar power generation system is composed of a solar cell array, a boost power converter, an ...
