Today's Madrid, Spain sunr position. Calculation include position of the sun and are in the local timezone.

Astronomical viewer to see the position of the planets, the moon, the sun and other celestial bodies from Madrid for any date and time. Animations in real time and animations programmed in time jumps. A ...

OverviewAstronomical observationsEuropean and Maya calendarsSources of astronomical inscriptionsMethods of astronomical observationBibliographyThe Maya were aware of the solstices and equinoxes. This is demonstrated in building alignments. More important to them were zenithal passage days. In the tropics the Sun passes directly overhead twice each year. Many known structures in Mayan temples were built to observe this. An example of such temples is the observatory at Xochicalco. The observatory is an underground chamber with a hole in the ceiling. Two days of the year on May 15 and July 29, the sun would directly illuminate an illustration of the su...

Online 3D simulation of the Solar System and night sky in real-time - the Sun, planets, dwarf planets, comets, stars and constellations
