A German brand founded in Ulm in 1948, WICONA has become a global benchmark for technologically advanced aluminium solutions for curtain walls, solar protection, doors and windows, including bullet-

Discover how rainscreen façades redefine the building envelope by integrating solar technology as an architectural material.

In contrast, a photovoltaic curtain wall not only insulates the building but also generates power for over 30 years. This reduces monthly electricity bills and ultimately pays for itself over time.

Surprisingly, Norway's high latitude offers unique advantages for solar generation, including long summer days, reflective snow, and cool ...

Compared with traditional photovoltaic ventilated curtain walls, this design achieved higher power generation, reduced heating and cooling loads, ...

A new research paper has calculated the technical potential of installing solar on building walls and roofs across Norway and the feasibility of ...

Façade-mounted solar panels are a rarity in Norway, where flat-roof installations dominate. Yet the unique challenges of Nordic winters--low-angle ...

strategies to support stakeholders, experts, or public authorities for successful implementation and integration of solar energy systems in high-sensitive built environments in the ...

Its goal is to slow the rate of ice loss, buying time as global emissions reductions take effect. The proposed structure would be just under 0.1 miles (152 meters) tall and stretch roughly 50...

The study uncovers a seasonal variation in solar energy production, with peak generation during the summer

Norway s solar curtain wall takes time

months due to extended daylight hours and more intense sunlight. However, ...
