Best practices for permitting interconnection and PV installation (e.g., subdivision regulations, new construction guidelines, and design requirements) are being developed.

These resources provide information and best practices for federal facilities interested in procuring on-site solar photovoltaic (PV) systems.

MassCEC's Cost and Performance Data tool allows you to view cost and performance data for actual Massachusetts installations by installer, with the ability to filter by location, type of project and ...

Projections of utility-scale PV plant CAPEX for 2035 are based on bottom-up cost modeling, with 2023 values from (Ramasamy et al., 2023) and a straight-line ...

NLR analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems.

General and specialized contractors assemble the PV system and construct supporting infrastructure. The scale and profitability of the project development and EPC industries will be impacted by ...

To reflect this difference, we report a weighted average cost for both wind and solar PV, based on the regional cost factors assumed for these technologies in AEO2022 and the actual regional distribution ...

There are five statistical techniques used to model specific hardware failure - fixed interval, exponential, log-normal, Weibul, and Bathtub-Shaped Distribution. The ...

This approach is intended to allow any input parameter in the model to be varied by up to a factor of two (up or down) to assess its impact on cost. All costs reported ...

Price inquiry for fixed-type pv distributions used on construction sites

This year, our report benchmarks costs of U.S. PV for residential, commercial, and utility-scale systems, with and without storage, built in the first quarter of 2020 (Q1 2020).
