To access additional data, including an interactive map of global solar farms, a downloadable dataset, and summary data, please visit the Global Solar Power Tracker on the Global Energy Monitor website.

PVGIS is a free web application that allows the user to get data on solar radiation and photovoltaic system energy production, in most parts of the world.

Data and analysis including a list of solar power in every country in ...

Start exploring solar potential by clicking on the map. Select sites, draw rectangles or polygons by clicking the respective map controls. Calculate energy production for selected sites. The Global Solar ...

Here we provide a global inventory of commercial-, industrial- and utility-scale PV installations (that is, PV generating stations in excess of 10 kilowatts nameplate capacity) by using a...

Total world solar electricity generation grew from 0.4 billion kWh in 1990 to about 1,280 billion kWh (1.3 trillion kWh) in 2022. China and the United States together accounted for about one ...

Solar photovoltaic power plants are often constructed in regions that receive abundant sunlight. The most favorable locations include desert areas ...

OverviewEuropeGlobal use figuresAfricaAsiaNorth AmericaOceaniaSouth AmericaEuropean deployment of photovoltaics has increased considerably since the year 2010. Cumulative solar PV capacity in the European Union reached over 300 GW in 2024, with industry projections anticipating total capacity more than doubling by 2030, which would take solar power's share in EU electricity generation (9.2% in 2023) over 20%. Outside of the EU, similar growth in solar power is taking place in the United Kingdo...

Countries in the Middle East, North Africa, and Sub-Saharan Africa regions dominate this category,

Solar photovoltaic power generation is located in

accompanied by Afghanistan, Argentina, Australia, ...

Data and information about power plants and their location across the globe, plotted on an Interactive world map
