In a landmark development for China's energy landscape, 2025 marked the first time solar power generation eclipsed wind energy. This historic transition ste...

The U.S. has installed enough land-based wind, offshore wind, and utility-scale solar capacity to power nearly 83 million American homes. Utility-scale storage ...

This study systematically evaluates the impact of extreme heat events on the stability, output potential, and spatial variation of China's wind-solar power generation systems from a climate ...

This report evaluates daily, weekly and monthly power system flexibility needs at the global and regional levels, and for different decarbonisation scenarios for the years 2030 and 2050.

View data on DC ties, generation outages, resource plan details and scheduled generation, and find forms to submit generation and outage data/requests.

This chart is a graphical representation of MISO's power supply (capacity) and demand using Real-Time actuals (solid lines) and the forecasted ...

The power industry's trusted source for generation technology, O& M, and legal & regulatory news for coal, gas, nuclear, hydro, wind & solar power plants; power jobs

Today, NERC's GADS maintains operating information on conventional generating units, wind plants, and solar plants. Through GADS, NERC collects information about the performance of electric ...

Companies across the United States are investing in record-levels of solar and energy storage to power their operations. Read the full report and see where America's top brands rank among the biggest ...

"Direct transfer trip," a costly approach to ensure that distributed generation shuts down during a power

Solar power generation events

outage, can make solar projects uneconomical. A national lab report points to a ...
