Global solar generation grew by a record 31% in the first half of the year, while wind generation grew by 7.7%, according to the report by the energy think tank ...

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity ...

In April, solar energy provided over 10% of the total electricity generation in the United States, reaffirming that solar continues to be the fastest-growing source of power in the country.

In a significant milestone for renewable energy, global solar generation reached an impressive peak of over 540 GW in April 2025, as reported by Solcast, a company under DNV that ...

The update reveals that solar photovoltaic generation rose by 16.6% from April of the previous year, accounting for just over 7% of total U.S. ...

The newest peak solar record in CAISO was also set April 11, when generation hit 20,818 MW, a 1,194-MW increase from the previous record set in ...

In April, solar provided 87% of new capacity, making it the twentieth consecutive month in which solar has taken the lead.

According to the U.S. Energy Information Administration (EIA), solar provided 10.64% of all electricity generated in April. That's a 26% increase over ...

Solar hit 10.7% of US power in April, a new record, as wind + solar beat coal and nuclear, and renewables came within 2% of natural gas.

April traditionally marks a surge in solar energy generation due to lengthening days and increased sunlight,

Solar power generation increased in April

contributing to both residential and commercial installations scaling up their output.
