---

In conjunction with our growing fleet of all-electric molding machines, on-site solar energy generation is part of our comprehensive strategy to reduce energy ...

Our Solar Rotational Molding systems include photovoltaic panels, batteries, and charge controllers - you can install an SRM system anywhere. No grid-tie electricity is needed.

We offer solar plastic injection molding and green solutions to reduce your environmental footprint. Discover our sustainable practices and get a quote!

Inesco and Wittmann are helping injection molding companies to exploit the potential for efficient use of direct current energy as a direct energy ...

Supported by the appropriate infra-structure, the injection molding machine and the robot are being powered directly by solar energy via a DC link. The two partner companies have jointly filed a patent ...

Wittmann has developed the system with its German customer, Wago, a connector and automation technology provider. They have jointly applied for patents. The ...

Through real-life case studies and success stories, we've witnessed how plastic injection moulding has enabled the rapid deployment of solar panels, optimised ...

Amid this transformative wave, a groundbreaking innovation has emerged--the successful commercial operation of a photovoltaic (PV) powered injection molding production line.

An injection moulding production cell, producing electronic parts from flame-retardant polyamide, is equipped with striking solar panels. This ...
