Sophia's technology is derived from a \$100 million program at Caltech designed for developing orbital solar plants. These solar plants utilize a sail-like structure that is more flexible and ...

Sophia Space Inc., a pioneer in modular, solar-powered, passively cooled, and AI-optimized compute technology, announced the closing of a \$10 million Seed round. The funding, led ...

Beyond hardware, Sophia Space is developing an orbital operating system, dubbed SOOS. It handles process scheduling, heat distribution management, firmware upgrades, security ...

Purpose-built for the orbital environment from the ground up, not adapted from terrestrial solutions. Each Tile has its own dedicated solar panel, providing continuous energy. Each Tile can be configured ...

Sophia, an Nvidia partner, has designed modular server racks with integrated solar panels it calls TILES, which are 1 meter by 1 meter in area and a few centimeters in depth.

SAN FRANCISCO - Sophia Space raised \$10 million in seed funding to accelerate development of space-based edge computers and orbital data centers. "The \$10 million round is a ...

Sophia Space says it has closed a \$10 million seed financing round to accelerate the development of orbital computing systems that could serve as the foundation for space-based data ...

The infrastructure being developed today for near-Earth applications will enable humanity's expansion throughout the solar system. Sophia Space's Path Forward The \$10 million seed round ...

The genesis of Sophia Space's technology is rooted in an unexpected source: a \$100-million-endowed program at Caltech. This initiative was originally dedicated to developing orbital ...

Sophia Space has secured \$10 million in seed funding to validate a new architecture for high-performance
