The Architectural Wall(TM) series is our flagship BIPV Facade System, designed for seamless integration into modern curtain wall structures. Utilizing high-efficiency N-type cells, it delivers exceptional ...

Summary: Discover how photovoltaic curtain walls revolutionize modern architecture by merging energy efficiency with aesthetic design. This article explores their applications, market trends, and real-world ...

Features a carbon-sequestering hybrid mass-timber structure, natural ventilation, and energy-efficient facade design operating on 100% ...

This study presents a novel switchable multi-inlet Building integrated photovoltaic/thermal (BIPV/T) curtain wall system designed to enhance solar ...

The sleek panels become an exciting new design element, proudly displayed for all to see. We also now have the technology to ...

Both curtain walls and spandrels from Onyx Solar elevate your building's sustainability and aesthetic appeal, providing customizable options and cutting ...

This project served as a practical application of my research, where I implemented the combined use of solar panels and glass curtain walls in an assembly-based approach.

To address this issue, this study proposed a multi-function partitioned design method for BIPV curtain walls aimed at reconciling the competing demand of different functions.

By seamlessly combining technologies with design freedom, these solar facades adapt to each project's style while acting as rain screens with a long, maintenance-free service life.
