Download our Q4 2025 US Renewable Energy Pulse report for detailed analysis of solar, battery storage, wind energy trends, and other energy sector performance measures.

Discover how wind, solar, and energy storage systems are reshaping global energy markets. This article breaks down sales rankings, regional growth hotspots, and what drives demand in these fast ...

As the cost of solar power and battery storage continues to fall, we are witnessing an unprecedented acceleration in global adoption. The combination of affordable solar and wind energy, ...

Investment in clean energy has accelerated since 2020, and spending on renewable power, grids and storage is now higher than total spending on oil, ...

In 2023, the U.S. electric power sector produced 4,017 billion kilowatthours (kWh) of electric power. Renewable sources--wind, solar, hydro, ...

Solar and wind remain the dominant segments, while investments in energy storage and community-based renewable projects continue to rise. Government support ...

In 2026, developers are likely to accelerate solar-plus-storage to serve hyperscaler demand, diversify revenue to manage volatility, and position early in long-duration and distributed storage for the next ...

Corporations, local utilities and rate payers now more often seek renewable energy out of want and need than sustainability mandates or goals.

The US wind industry continues to experience a prolonged downturn, with clean energy buyers increasingly favoring solar and battery storage over wind.

Which sector is better for wind solar and energy storage

With the new projects online, renewables (including wind, solar, geothermal and hydropower) and battery storage now make up 30% of the country's large-scale power generating ...
