Unfortunately, the winds are not projected to pick up until later in June, the Daily Mail reports, and the low energy production calls into question ...

Wind turbines are essential for generating electricity and can be stopped when there is no wind. This is because energy consumption contributes ...

Wind can be variable and low wind speeds in Europe this summer ...

Even with this record capacity last year, there was also a decline in power generated from wind for the first time. There was 2.1 percent less wind ...

Of the 162 countries analyzed by the Global Energy Monitor, only 56 had zero wind farms; of those, only 12 had no plans on record to build wind ...

Yes, wind turbines need wind to create power. No wind, no power generation. What is a wind turbine? A wind turbine is a device that converts the wind's kinetic ...

How do we ensure energy is available at all times - even when the sun doesn't shine and the wind doesn't blow. Read the expert take on this pertinent question

Prolonged low-wind events, termed wind droughts, threaten wind turbine electricity generation, yet their future trajectories remain poorly understood.

Curious about how wind turbines work when there's no wind? This article explains how turbines generate electricity, even when it's not windy outside!

In an article published this week in the journal Nature Climate Change, the Beijing and Shenzhen-based

Will there be no wind for wind power generation

researchers find that around 20% of the globe's wind turbines are located in areas ...
