Combining wind with other renewable resources such as solar, hydropower and the ability to smartly manage our electricity ...

Actually, no, as most of these "new" types of electricity demand are far less dependent on when power is used, thereby adding flexibility on the ...

Wind turbines are essential for generating electricity and can be stopped when there is no wind. This is because energy consumption ...

As the anemometer registers wind speeds above the cutoff limit, the wind turbine will stop working. Some are programmed to stop only when the ...

Instead of stopping when there is no wind, generators like those developed by Siemens benefit from technology SCADA, which allows the blades to ...

Unfortunately but understandably so, wind power can't happen without wind. Wind turbines only require a small amount of wind ...

Without storage, wind power generated at night when there is no demand is wasted. The design proposal for the project would use that power to pump air into the salt caverns, ...

Wind energy infrastructure doesn't produce power if the air isn't moving, and solar doesn't generate power if the sun's not out. But that doesn't mean that either source of energy ...

These are some of the solutions that will help to ensure there's enough clean energy to meet demand, even when the wind isn't blowing and the sun isn't shining.

Will wind power generation stop when there is no wind
