-----

Australia has some of the best renewable energy resources in the world. Our potential to produce abundant renewable energy is a powerful ...

Australia's main power grid saw a substantial rise in renewable energy generation -- including solar and wind -- over the past year.

In the 2000s and early 2010s, coal was initially replaced by gas, with only moderate growth in solar and wind. But in the last five years, solar and wind have been ...

Solar and wind supplied more electricity than the demands of all households in 2021-22, new data has revealed. The Australian Bureau ...

OverviewWind resourcesWind farmsWind power by stateEconomicsEnvironmental impactPoliticsMajor wind projectsThe abundant wind resources in Australia provide for the country to grow its renewable energy sector. The southern coastline lies in the Roaring Forties. Sites have average wind speeds above 8-9 m/s at turbine hub height. Australian wind farms produce an average capacity factor range of 30-35%. South Australia's large share (along with nearby Victoria) means most of Austr...

Australia's latest CIS Tender 4 has delivered a landmark set of 20 clean energy projects, totaling to a massive 6.6 GW of renewable capacity and 11.4 GWh of battery storage. ...

The record came as Australia went past another milestone, with renewable energy supplying more power than fossil fuels in a quarter ...

Australia's big wind and solar farms are generating more power than ever, but not all of it can be used, raising concerns about ...

Investment in new large-scale solar and wind in Australia fell by 64% year on year in the first half of 2025 as
