Global wind power capacity forecast (GW) from 2022-2030 split between onshore and offshore generation. Additional charts include the total ...

Wind power took first place as the strongest net electricity producer, followed by photovoltaics, which increased its production by 21 percent in 2025 ...

New installations of generating capacity support the increase in our renewable generation forecast. Wind and solar developers often bring their ...

Just because a wind turbine has a capacity rating of 1.5 megawatts, that doesn't mean it will produce that much power in practice. Wind turbines ...

recent years have seen a drastic increase in negative power prices, during periods of correlated wind and or solar output, especially outside of peak demand periods.

The capacity of 2 GW roughly corresponds to the output of two conventional coal-fired power plants. Once implemented, they shall deliver a capacity of 28 GW and reduce environmental impacts by up ...

The world's installed wind power capacity now meets well over 10% of global electricity demand - and much more than nuclear power. More than 30 countries now have a share of wind ...

Also includes information on each country's actual yearly production of wind-generated electricity, as well as the amount of electricity generated in ...

Data on renewable power capacity represents the maximum net generating capacity of power plants and other installations that use renewable energy sources to produce electricity.
